Note: Page numbers followed by *b* indicate boxes, *f* indicate figures, and *t* indicate tables.

## A

- A band, 124, 125*f*
- Abdominal quadrants, 77
- Abdominopelvic cavity, 77–78
- Abduction, hip, 184
- Ablation, 1156–1158
  - Arrhenius-Henriques model for quantitative analysis and, 1149
  - lasers and, 1148, 1151–1153
  - photothermal, 1151–1153
  - water content and, 1157–1158
- Absorption
  - of light, 1116–1118, 1121–1127
  - measuring, 1116–1118, 1127–1130
  - of photons, temperature and, 1132–1133
  - pure, 1121–1124
  - ultrasound wave, 1065
- Absorption-based optical sensors, 653–654
- Absorption coefficients, 1022–1024
  - computerized tomography and, 1024
  - Hounsfield scale for, 1025*f*
- Accuracy, sensor, 612
- Acetabular cup, 231
- Acetylcholine, muscle contraction and, 125
- Acid–base balance. *See* pH
- Acidity. *See* pH
- Acinus, 295
- Acoustic loss factors, 1055, 1056–1058
- Acoustic wave propagation, 1046–1051
- Acoustic windows, 1061–1063
- Actin, 88
- Action potentials
  - biopotential measurements and, 616–621
  - cardiac cycle and, 100–101
  - definition of, 99–100, 759
  - Hodgkin-Huxley model of, 783–797
  - muscle contraction and, 755
  - in neurons, 759
  - nodes of Ranvier and, 112
  - noise from, 589–590
  - time dependence equation for, 793–797
  - Volta and, 753–756
  - voltage clamp experiment and, 783–791
- Activation function, 201–205
- Activation wavefronts, 100–101, 100*f*
- Active channels, 760
- Active circuit elements, 519
- Active electrodes, 646
- Active euthanasia, 50–51
- Active-state tension generators, 835–838, 839–842
  - linear homeomorphic muscle model and, 864–865
  - linear muscle model and, 850–851
- Active transport, 81–82
- Adding-doubling method, 1128
- Adduction, hip, 184
- Adenine, 79, 79*f*
- Adenosine triphosphate (ATP), 79
  - active transport and, 81–82
  - enzyme kinetics, 459
  - mitochondria and, 87–88, 87*f*
  - movement in/out of mitochondria, 490–491
  - muscle contraction and, 124–125, 126
- Adhesion, cell, 299
- Adhesion molecules, 308
- Ad Hoc Committee, Harvard Medical School, 47
- Adjuvants, 249
- Adsorption, electrostatic, 251, 251*f*
- Adult stem cells, 28
- Advanced Tissue Sciences, 282–283
- Adventitia, 265
- Aesculapius, 3–5
- Afferent neurons, 49–50
- Agonists, 52. *See also* antagonistic pairs
  - eye movement and, 822
- AIMBE. *See* American Institute for Medical and Biological Engineering
- Airflow transducers, 632–633
- Albumin, 240
- Aldini, Giovanni, 754–755
- Algebraic reconstruction technique (ART), 1034–1035
- Alginate, 222*t*
- Alkalinity. *See* pH

- Allogeneic transplants, 278
  - bone marrow, 280–281
  - rejection of, 345
- All or none phenomenon, 784
- Allosteric activators and inhibitors
  - modifier effect, 499
  - quasi-steady-state approximation, 501–502
  - true steady-state, 502–503
- Alpha chains, 238
- Alpha particles, 999, 1000
  - decay of, 1004–1005
  - parent and daughter elements and, 1004
- Alpha radiation, 1000
- Alternating current, 572
- Alum, 249
- Aluminum hydroxide, 249
- Aluminum oxides, 222*t*
- Aluminum phosphate, 249
- AMA. *See* American Medical Association
- American College of Clinical Engineering (ACCE), 20
  - code of ethics of, 43, 44
- American Institute for Medical and Biological Engineering (AIMBE), 30–31
- American Medical Association (AMA)
  - Principles of Medical Ethics, 41
- American Nurses Association, 42
- American Society for Testing and Materials (ASTM), 258, 258–259, 260–261
- American Standard Code for Information Exchange (ASCII), 590–591
- Amino acids
  - biomaterial interactions with, 240
  - biomaterial surface chemistry modifications and, 251
  - codons and, 90–91
  - essential, 78–79
- Ammonia
  - detoxification, 349
  - microbial biosensors for, 650
- A-mode displays, 1042–1043
- Amorphous calcium phosphate, 229–230
- Amperes, 514
- Amperometric sensors, 641
- Amplifiers
  - in biological signal acquisition, 674
  - system identification and, 911
  - time gain compensation, 1069–1070
- Amplitude
  - biological signal acquisition and, 675
  - linear systems and, 700–703
  - in saccades, 826
  - scaling constants, 700–702
  - in trigonometric Fourier series, 680, 681
- Analog filters, 560
  - active, 578–588
  - band-pass, 579–580
  - in biological signal acquisition, 674
  - in biological signal analysis, 706–711
  - cascading, 586, 588
  - high-pass, 579–580
  - as linear systems, 706–711
  - linear systems and, 706–711
  - low-pass, 579–580
  - notch, 579–580
- Analog signals, 512–513
- Analog-to-digital (A/D) converters, 588–589
  - biological signal acquisition and, 675–679
  - gamma cameras and, 1018
  - resolution of, 677–678
  - voltage clamps and, 785–786
  - z transform and, 699
- Anatomical position, 76–77
- Anatomy, 995–1038
  - cellular organization and, 78–93
  - definition of, 75–76
  - homeostasis and, 126–131
  - locational terminology in, 77
  - organ systems in, 94–126
  - tissues and, 93–94
- André, Nicholas, 137
- Anger, Hal, 1016
- Angiography, 12
- Angioscopes, 1162
- Angle of orientation, 138
- Angular momentum, 157
- Angular momentum quantum number, 1001
- Angular velocity vectors, foot, 187
- Anharmonic oscillators, 1142
- Animal testing, 261
- Anions, 84–85
- Ankles
  - gait analysis and, 184–188
  - instantaneous power of, 188
  - plantar flexed position of, 190–191
- Annals of Biomedical Engineering*, 31–32
- Annihilation coincidence detection, 1018
- Anodes, metal corrosion and, 242
- Antagonistic pairs, 822
  - linear homeomorphic model and, 855, 873, 876
  - in SIMULINK, 874–875
- Antagonists, 121–122
  - eye movement and, 822
- Anterior position, 76–77, 76*f*
- Anterior-superior-iliac-spine (ASIS) system, 177–179
- Anthropomorphic mass moments of inertia, 153–157
- Antibodies, immunoassay sensors and, 660–661

- Anticodons, 90–91  
 Antigens, immunoassay sensors and, 660–661  
 Antineutrinos, 1007  
 Aortic arch, 97*f*, 98*f*  
 Aortic pressure, 728, 728*f*, 730*f*, 733*f*  
 Aortic valves, 102, 102*f*  
 Apnea, in preterm infants, 55  
 Apoptosis, 277  
   stem cell, 293, 298  
 Appendicular musculature, 121  
 Appendicular region, 77  
 Appendicular skeleton, 118–119  
 Aristotle, 50  
 Arithmetic and logic units (ALUs), 590  
 Arrector pili muscles, 127  
 Arrhenius-Henriques model for quantitative analysis, 1149, 1155–1156  
 Arterial vessels, 196–199  
   cardiovascular mechanics and, 205–217  
   element values for, 205*t*  
 Arterioles, 98*f*, 103–104  
   capillaries mass transport, 948–949, 949*t*  
 Arthroscopes, 1162  
 Articular cartilage, 170–171  
 Artificial assist systems, 349  
 Artificial intelligence, 732–745  
   fuzzy logic, 735–738  
 Artificial neural networks, 732–734, 738–745  
   training, 740  
 Artificial organs  
   blood vessels, 13–15  
   heart, 56*b*  
   heart valves, 13–15, 102, 102*f*  
   joints, 120–121, 121*f*  
 Ascending aorta, 96*f*, 98*f*  
 Asparagine, 93*t*  
 Assays  
   colony-forming, 356  
 Asymmetric anterior portion, 77  
 Asymmetric posterior portion, 77  
 Atlas, 119, 120–121  
 Atomic force microscopy (AFM), 259  
 Atomic mass, 999, 1000  
 Atomic number, 999, 1000  
 Atomic structure, 1001–1008  
 Atoms  
   chemical theory of, 998  
   ionization of, 1012  
 ATP. *See* Adenosine triphosphate (ATP)  
 Atrial repolarization, 101–102  
 Atrioventricular (AV) node, 100–101, 100*f*  
 Atrioventricular valves, 102, 102*f*  
 Attenuation, 1065  
 Attenuation coefficient, 1124–1125  
 Attitudes, 22–23  
 Auditory ossicles, 119  
 Auger electrons, 1002  
 Autocrine factors, 286  
 Autologous transplants, 278  
   bone marrow, 280, 281  
   contamination and, 347  
   knees and, 283–284  
 Autonomic nervous system, 115  
   parasympathetic, 115  
   sympathetic, 115  
 Autosomal chromosomes, 88–89, 89*f*  
 Avogadro's number, 1000, 1001  
 Axial deformation of bone, 163  
 Axial load of bone, 162–163  
 Axial musculature, 121  
 Axial region, 77  
 Axial skeleton, 118–119  
 Axis, 119, 120–121  
 Axons, 112, 757  
   Goldman equation and, 767–770  
   squid giant, 767–770  
   in whole neuron model, 797–800  
 Azimuth plane, 1069
- ## B
- Backprojection, 1024, 1034  
   filtered, 1035, 1036  
 Backpropagation, 740  
   in computerized tomography, 1026*b*  
 Bahill, A.T., 852  
 Ball-and-socket joints, 120–121, 136  
 Ballistic light, 1166–1167  
 Band-pass filters, 579–580  
   in biological signal analysis, 707  
   creating, 585–588  
   cutoff frequencies in, 709  
   frequency domain representation of, 709–711  
   time-domain representation of, 709–711  
 Barium fluoride, 1160  
 Basal lamina, 294–295  
*Basic Orthopaedic Biomechanics* (Mow, Hayes), 175  
*Basic Transport Phenomena in Biomedical Engineering* (Fournier), 194–195  
 Batteries, 756  
 Beam plots, 1066–1067  
 Beam tip deflection, 163–164  
 Becquerel, Henri, 997–998  
 Becquerels, 1009  
 Beeman, D., 747–748  
 Beer-Lambert's law, 1117, 1123, 1127–1128  
   biochemical measurement and, 1139–1140

- Beer-Lambert's law (*Continued*)  
   optical biosensors and, 653  
   photon absorption and, 1133
- Beer's law, 1144
- Bending moment, 164–166
- Beneficence, 44–45
- Berger, Hans, 511–512
- Bernoulli equation, 196  
   biofluid mechanics, 958
- Beta particles  
   negatron decay of, 1005–1007  
   parent and daughter elements and, 1004  
   positron decay, 1007
- Beta radiation, 999
- Beta-tricalcium phosphate, 229–230
- Biacoustic signals, 671
- Binding constants, 313–314
- Binding energy, 1002–1003
- Bioanalytical sensors, 647–651  
   enzyme-based, 648–649
- Bioartificial liver specifics (BAL), 348–349
- Biocatalytic properties, 648
- Biochemical measurement techniques, 1139–1147
- Biochemical reactions  
   allosteric activators and inhibitors, 499–503  
   catalysts, 448  
   cellular respiration, 485–497  
   chemical bonds, 449–450  
   competitive enzyme inhibitors, 497–499  
   cooperative reactions, 503–508  
   diffusion, 473–485  
   enzyme kinetics, 458–466  
   higher-order and sequential, 455–456  
   one-compartment model, 467–471  
   quasi-steady-state, 456–458  
   renal excretion and metabolism, 467  
   reversible, 453–455  
   single-stage, 450–452  
   stoichiometric equation, 448–449  
   two-compartment model, 471–473
- Biochemical signals, 669–670
- Biocompatibility testing, 260–261  
   of sensors, 611
- Bioelectric phenomena  
   action potentials, 783–791  
   basic laws in, 761–763  
   capacitive properties, 776–781  
   channels and, 760  
   Donnan equilibrium and, 764–767  
   Einstein relationship and, 763  
   electromotive properties, 773  
   equivalent circuit model for cell membranes and, 773–782  
   Fick's law on, 761–762  
   Galvani's experiments on, 751–753  
   Galvani-Volta controversy over, 748–749  
   Goldman equation and, 767–770  
   history of, 748–756  
   ion pumps, 770–772  
   membrane potentials, 758–759, 781–782, 793–797  
   Na-K pump, 776  
   neurons and, 756–760  
   Ohm's law on, 762  
   resistive properties, 773–774  
   resting potentials and, 760  
   Volta on, 753–756  
   whole neuron model and, 797–800
- Bioelectric signals, 668, 669f
- Bioengineering, definition of, 17
- Biofluid mechanics  
   Bernoulli equation, 958  
   blood and fluid viscosity, 958–963  
   blood pressure measurement, 973–975  
   boundary layers, 967–972  
   conservation of mass, 963–964  
   continuity equation, Newtonian fluid, 963–964  
   fluid manometer, 958f  
   hydrostatic pressure, 957, 958  
   Navier Stokes equations, 964–965  
   Newtonian viscosity, 959  
   Poiseuille flow, 965–967  
   Reynolds number, 972–973  
   rheology, 958–959  
   total pressure, 958
- Biofluid Mechanics* (Chandran), 194–195, 196
- Bioinstrumentation  
   active analog filters and, 578–588  
   artificial neural networks in, 741–745  
   basic systems in, 512–514  
   for biological signal acquisition, 674  
   capacitors and, 548–551  
   charge in, 514  
   circuit solving and, 551–560  
   current in, 514–517  
   design of, 588–607  
   developments in, 510–512  
   inductors and, 544–547  
   linear network analysis and, 531–537  
   op amps and, 560–572  
   power and energy in, 518–519  
   radiation imaging, 1013–1018  
   resistance in, 520–531  
   sources in, 519–520  
   superposition and, 537–541  
   Thévenin's theorem and, 541–544

- time-varying signals and, 572–578
- voltage in, 517–518
- Biomagnetic signals, 668–669
- Biomaterials, 219–272
  - biocompatibility of, 260–261
  - blood/protein interactions with, 240
  - in cardiovascular devices, 265–267
  - ceramics and glasses, 228–231
  - challenges in, 338, 339
  - characterization of, 258–260
  - composites, 233–234
  - definition of, 221
  - degradation and resorption of, 247–248
  - design and selection of, 236–240
  - drug delivery with, 267–270
  - extracellular matrix and, 237
  - hierarchical design in, 238–239
  - immunogenicity and, 248–249
  - metallic corrosion and, 242–246
  - metals, 224–228
  - in musculoskeletal repair, 263–264
  - natural materials, 234–236
